SunIZup helps you to know the timings of the Golden Hour and Blue Hour which are also known as Magic Hour in photography and cinematography fields for any selected location and any chosen date. The timings are calculated in the app by determining the sun's position at the given location on the given date. It is a proven fact that Landscape photography during the Magic hour results in better photos than pictures taken at any other duration of the day.

## FEATURES

- \* Sundial which is Rotatable over a 24hr period showing the different phases of light
- \* Golden hour, Blue hour, Twilight times for morning and evening photography
- \* Daylight and Nightsky times
